@ginnybarbour

March, 8 2017

# What is open access?

Open Access

=

free access

+

reuse rights

+

author attribution rights

+

permanent archiving

Despite massive global impetus for change still only around 15-20% full OA 15 years after initial definitions of OA

Sample of 100, 000 articles indexed by Crossref

- 28% of all journal articles are freely available online
- most do not have an associated license, either on a journal's website or in repository, hence reuse rights are unclear

The State of OA: A large-scale analysis of the prevalence and impact of Open Access articles

[10.7287/peerj.preprints.3119v1](https://doi.org/10.7287/peerj.preprints.3119v1)

A long term vision:

a fully interconnected, global scholarly ecosystem supported by a wide variety of open publishing models, underpinned by sophisticated linking of well-curated, interoperable research articles and other outputs, including data and software.

# We are far from a fully interoperable & open scholarly ecosystem...

- OA for research outputs often equated with just free
- Format, metadata and license requirements usually not stipulated (or even understood)
- Variable adoption
- Piecemeal infrastructure

For research articles we need an approach that:

- Can be applicable to a wide range of models
- Maximises readership, citation, use & re-use
- Can be built into incentive structures
- Is supported by appropriate infrastructure
- Makes compliance easier than not

# A new approach: F.A.I.R.

FINDABLE

associated with rich metadata, including permanent identifiers

ACCESSIBLE

available via a public repository or open publishing platform

INTEROPERABLE

in a format that allows it to be exchanged and integrated

REUSABLE

has a licence that specifies use and reuse rights

# Developing a F.A.I.R. approach

- July 2016: working group convened under the auspices of the Universities Australia Deputy Vice Chancellors (Research) Committee
  - Chair, Linda O'Brien, Griffith University
- July - October 2016: F.A.I.R. statement development and consultation
- October 2016 F.A.I.R. statement circulated for endorsement to national and international groups
- April –June 2017 agreement on formation of steering group to advise on implementation
- Council of Australian University Librarians and Australasian Open Access Strategy Group take on oversight of F.A.I.R. statement
  - Chair, Jill Benn, UWA

# The F.A.I.R statement

**By 2020:**

*“All Australian publicly funded research outputs will be **Findable, Accessible, Interoperable and Reusable**.*

*Access to research outputs will accord with international practices that are **well defined, secure and trusted**, and delivered through **sustainable, fair, and efficient dissemination models**.*

*Publicly funded researchers will be **expected, supported and rewarded** to disseminate their work in such a way that anyone can find and re-use research publications and research data for further research, policy development, innovation, education and public benefit.”*

<https://www.fair-access.net.au>

*“This will require **different approaches** across different types of research output, a **long-term national commitment**, and consideration of the global change agenda.”*

<https://www.fair-access.net.au/>

# Development and implementation of the F.A.I.R. statement: next steps

## Current steering group members

- Chair, Jill Benn, UWA (Program Director, CAUL Fair, affordable and open access to research program)
  - Representatives of Dept of Education and Training, and Dept of Innovation and Science
  - Representatives of UA, ARC, and NHMRC
  - Virginia Barbour, AOASG
  - Adrian Barnett, IHBI, QUT
  - Tim Cahill, KPMG
  - Sharon Kitt, ARMS
  - Karen Johnson, University Librarian, CSU
  - Roxanne Missingham, Council of Australian University Librarians
  - Ross Wilkinson, ANDS

## Work 2017 – 2018

- Implementation and further dissemination plan in development
  - Decision on first components to support
  - Coordination with relevant national (eg CAUL, ANDS) and international initiatives.

What could first steps to F.A.I.R. be and who would implement?

## Identifiers & licences

Institutions

**Ensure all research outputs have unique identifiers & and all researchers have ORCID iDs**

Provide and maintain a repository, with minimum metadata set for all items

Provide access and tools to have outputs in machine readable format

**Collaborate on overarching approach to licensing eg – UK Scholarly Licence equivalent**

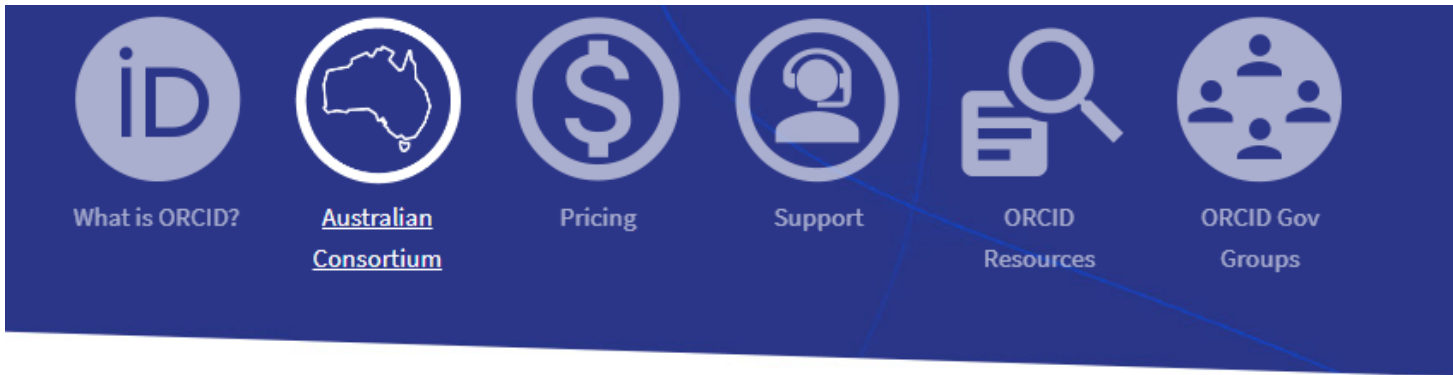

Researchers

**Obtain and use ORCID iD  
Use other identifiers as needed**

Make accepted manuscripts available for deposit in repository

Provide outputs in machine readable format

**Retain the necessary rights to their work**

Making research outputs Findable: a whole of country approach: ORCID

## Vision 2020

Global framework

## AUSTRALIA'S ORCID ASPIRATIONS

National infrastructure

Our aspiration is that, by 2020:

- All active researchers in Australia have an ORCID identifier
- All Australian researchers actively use their ORCID throughout the research lifecycle
- ORCID is seen as the best way in which to identify international research experts
- The ARC/NHMRC will integrate ORCID with their grant management systems
- Government agencies draw upon ORCID data, where possible, for institutional research performance reporting and assessment
- The Australian ORCID Consortium is a thriving, sustainable and valued organisation which has steadily grown its membership base.

Frictionless for researchers

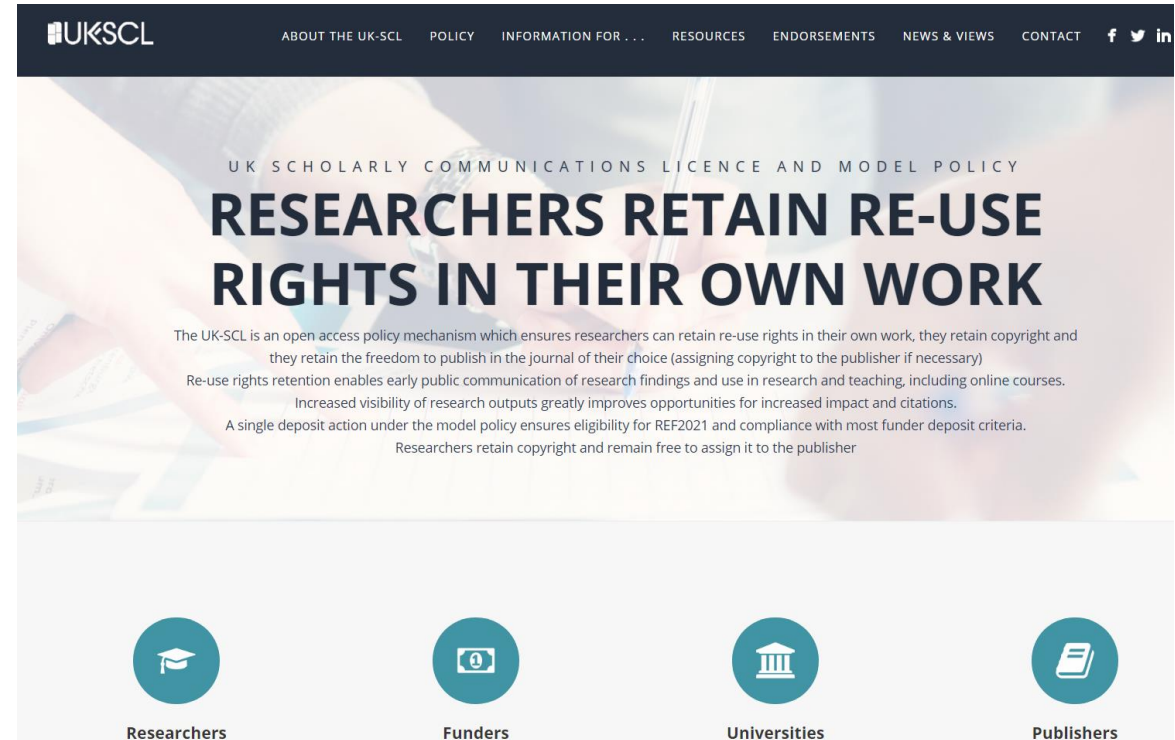

# Making research outputs Accessible and Reusable: rationale for applying a UK whole-of-country approach

- Researchers and Institutions need to retain re-use rights
- Funders seek compliance with policies
- All want to maximise impact of publication

and...

- Researchers need be able to publish where they wish
- Libraries want to enable frictionless services

HARVARD LIBRARY  
Office for Scholarly Communication

For Assistants

Model Open Access Policy

Global framework

UK-Scholarly license (SCL)

National infrastructure

Frictionless for researchers

- Based on Harvard model policy
  - Used by over 60 institutions worldwide
- Author retains copyright but grants institution (non-exclusive) right to post AAM CC BY-NC in its repository
- Where a journal seeks a waiver, this can be managed by exception (happens <5% in the USA)

Making research outputs
